Team

Our team

We are a bunch of techies & innovators from New Zealand.

We are passionate about tackling challenges and learning a variety of new technical & functional skillsets that will distinguish all of us in little New Zealand.

Context

Project objective

We want to assist community cooperation by connecting people to give away things to one another on a platform that is safe and secure.

Problem & opportunities

Problem statement

There is a growing interest in enabling communities to cooperate among themselves to solve problems in times of crisis, whether it's to advertise where supplies are held, offer assistance for collections, or provide other local services like volunteer deliveries. While governments may be rolling out broad programs, cooperation at the local level is usually the most effective way of getting help to where it is most needed. While traditional social media is one way of communicating within a community, this is (by its very design) not locally focused, and often not sufficiently structured to enable rapid discovery of what and where help is needed. With the COVID-19 crisis, we have already seen problems with the local supply of food, equipment, and other supplies.

Regive Product Roadmap

Goals

How might we...

**Establish, and retain trust in
our communities through a
platform that is cooperative,
and reliable for everyone to
give their things as donations?**

Goals

Product/Service goals

100+ people locally

During this first beta release, we want to onboard and get as many people associated with Regive to utilise by giving away the things they have.

Include charities

We want to include connecting with donation centers and charities, so that they are not overwhelmed with donations from people.

Launch on Product Hunt

We anticipate to be able to reach to more people out of New Zealand and hopefully target in Australia, as a lot of things get dumped on the streets.

Design

Principles

Ease of use

A simple, easy-to-use platform that is not about profiting but about sharing by communicating to give things to one another in a safe and secure process.

Reduce buying

In a time of a global pandemic, we want to reduce unnecessary purchasing and panic buying.

Assist locally

In a time of a disruptive global pandemic, some people may be stuck in a new country very recently and could be struggling to find what they looking for. We intend this service should help new people like they are a local.

Problem & opportunities

Business case

01

Why is this important to the business? Is there some data, insights or business goals that highlight why this is an important project.
